

## **aMail Signs VAR Agreement with AXSionics AG, to Become Global AXSionics partner.**

**Ottawa, Ontario – May 25, 2008** – aMail Inc. (aMail) announced the signing of an agreement with AXSionics AG, (AXS) to become a Value Added Reseller (VAR), allowing aMail to resell and license products for the Canadian and US markets. The licensed products provide secure identity-verified access to Internet web portals for the conduction of sensitive transactions. The AXSionics product FLICK'RCARD (*a personal identity credential*) and its accompanying authentication server will for example allow patients and health care providers to securely access electronic health records and permit the secure identity-verified transmission of personal health information over the public internet.

“The continuing shift to electronic medical records has increased risks to patient safety, privacy and the security of patient data and increased the risk of medical identity theft”, said Sal Khan, CEO of aMail. “Similarly, secure identity-verified access to online bank accounts to transfer funds, and pay bills is another area where FLICK'RCARD™ can play a significant role by preventing the hijacking of bank accounts and minimizing the theft of an online banker’s identity,” continued Khan.

FLICK'RCARD™ is a “*personal identity credential*” which uses embedded PIN and fingerprint technology with a unique match-on-card system to verify the identity of its owner. Since the fingerprint template is stored onboard FLICK'RCARD™, a central biometric database is not required, alleviating privacy concerns. Internally FLICK'RCARD™ contains 128 digital credentials which provide secure identity-verified access to 128 different online and offline access points.

As a reseller of the AXSionics products, aMail will be able to support the North American health care and financial markets in meeting their goals to provide secure identity-verified access to electronic health records and online financial transactions.

“ASXsionics is excited about entering into the partnership with aMail and is looking forward to the resale of its products in Canada and the US,” said Alain Rollier, CEO of AXSionics.

### About aMail Inc.

aMail Inc. is a private Canadian company that is developing patented secure electronic mail software that will allow a user to send and receive secure, encrypted and biometrically authenticated electronic mail. aMail products also utilize biometric logon for remote access to online Internet portals, computers and computer networks to replace passwords and tokens.
